Heavy Metals is performed using ICP-MS (Inductively Coupled Plasma - Mass Spectrometer) which can screen down to single digit ppt concentrations. LOD is 0.04 ppm for all metals. *Based on FL action limit.

Microbial is performed using PCR (Polymerase Chain Reaction) which consists of sample DNA amplified via Taqman Polymerase Chain Reaction (PCR) as a crude lysate which avoids purification. With a LOD of 10³ cfu/g, it is pathogenic E. Coli, Salmonella, A. fumigatus, A. niger, A. terreus. A terpenes is detected in 1g of a sample, the sample fails the microbiological purity testing.

This report shall not be reproduced, unless in its entirety, without written approval from Labstat. This report is an Labstat certification. The results relate only to the material or product analyzed. Test results are confidential unless explicitly waived otherwise. Void after 1 year from test end date. Careful control of batch material may vary depending on sampling error. IC=In-control QC parameter; NC=Non-controlled QC parameter; ND=Not Detected. Method Analyzed, operators, the Millen, ppm-parts per Billion, Level of Detection (LOD) and Level of Quantitation (LOQ) are terms used to describe the smallest concentration that can be reliably measured by an analytical procedure. Reproducibility of two measurements. Action Levels are State determined thresholds variable based on uncertainty of measurement (UM) for the analyte. The UM error is available from the lab upon request. The "Decision Rule" for the pass/fail does not include the UM. The limits are based on F.S. Rule 64-4.314.
